Calculate your Prerequisite Grade Point Average (PGPA)

1. **Determine the QUALITY POINTS earned.**
   Fill-in the credit hours attempted/earned and grade point earned for each prerequisite course completed for the major in the table below. Use the chart provided to convert the letter grade earned to grade points.

   If a course is repeated, only the grade earned the second time is used for the GPA calculations. If MTH 121 or MTH 141 is attempted or completed, these substitute for MTH 131 (calculus). The School of Management's repeat policy is applied to all attempted calculus courses.

2. **Add the “ Credits hours” and “ Quality Points” columns and write the totals for each.**

3. **Determine the PGPA by dividing the TOTAL QUALITY POINTS by TOTAL CREDIT HOURS (include attempted hours with F grades).**

   \[
   \text{Total quality points} \div \text{Total credits hours} = \text{PGPA}
   \]

   **EXAMPLE:**

   Using the information from the example above, the Total Quality pts = 50 and Total Credit hours = 18
   
   \[
   50 \div 18 = 2.77 \text{ PGPA (Prerequisite Grade Point Average)}
   \]
